Justification for Exportation	Most of the waste from this generator will go to the Compact facility, however there are some waste streams that have a biological component and as such must be treated prior to burial per the WCS criteria. As a small waste generator, Quest does not have the means or an established process needed to prepare this waste for disposal at WCS. The processing required increases the risk of contamination, increases exposure of radionuclides to employees. Burning these wastes is the best available technology.
